PROFESSIONAL SPRAYERS USER'S MANUAL

Safety Precautions

- Do not pressurize tank with external air or gas source; do not pressurize above 50 psi.
- Do not adjust the tip or change spray patterns while depressing the valve trigger.
- Open tank cap slowly to release air before removing; keep tank upright when releasing pressure.
- Do not store or transport the unit while tank is pressurized.

Before Starting

- Inspect the hose, tank gasket, discharge valves, and nozzle for signs of wear or damage. These parts must be in full working condition to permit tank pressurization.
- It is recommended that compressed-air sprayers be used with a pressure gauge (B&G #AG-3) or a pressure regulator (B&G #460) fitted to the valve.

Operating Instructions

Filling and Mixing

- When mixing insecticides in the tank, first add about 1/2 the water then the chemical, followed by the remainder of the water required.
- Note gallon marks on the side of the tank and mix accordingly.
- Replace the pump and tank cap assembly, be sure the tank gasket fits properly; tighten the cap until snug (do not over tighten).
- Mix all insecticides according to label directions.

Pressurizing the Tank

- Disengage the handle from locked position by pressing down and turning 1/4 turn to the left.
- Pump plunger up and down until desired pressure for application is achieved, then engage handle in the locked position.

Operation

B&G sprayers are designed for a variety of professional uses, such as outdoor perimeter spraying, and indoor spraying, which includes surface treatments and crack-and-crevice applications.

Application Rates*

50" coarse fan = 14.1 oz/min
80" fine fan = 6.4 oz/min
Pin stream = 8.9 oz/min (large)
4.5 oz/min (small)

*Calibrated at 20 psi

Care and Maintenance

- Flush tank, valve, and extension with clean water regularly.
- Do not use bleach or ammonia-based cleaners, these will damage the stainless steel and brass parts.
- After rinsing the tank with clean water, pressurize the tank and flush the valve and hose.
- Inspect hoses and hose connections, gaskets, washers and other fittings for wear; replace when necessary.
- Clean the filter at the hose/valve connection regularly.
- Do not use metal objects to clean the orifices in the nozzle, this will disrupt the liquid spray pattern.
- Use the B&G Cleaning Kit (#22028000) for regular maintenance and cleaning of the sprayer.

Trouble Shooting

Problem:	Tank not holding pressure
Solution:	• Tighten tank cap • Replace tank gasket (P-268)
Problem:	Tank not getting air pressure
Solution:	• Replace plunger cup (NFO-277) • Replace or add oil to leather plunger cup
Problem:	Pump cylinder filling with water when pumping
Solution:	• Clean around the check valve at the bottom of pump cylinder • Replace the check valve (PV-266)
Problem:	Holds pressure, but will not spray
Solution:	• Nozzle clogged, clean with a soft brush • Cracked siphon tube, replace • Siphon tube clogged, clean end • Clean strainer at the base of the valve, at the hose / valve junction
Problem:	Hose leaks at tank fitting
Solution:	Replace hose washer (D-51-P)
Problem:	Valve body leaking
Solution:	• Extenda-Bar: Tighten packing nut, replace packing washers (in D-124 Repair Kit) • XR-Valve: Replace O-ring at base of handle; replace copper gasket at base of valve stem (in GT-100 Repair Kit) • Ban-Drip: Tighten packing nut; replace rod packing (RP-48)
Problem:	Tip Leaking
Solution:	• Extenda-Bar: Clean or replace soft seat gasket, replace valve spring (in GD-124 Repair Kit) • XR-Valve: Clean or replace check valve at end of valve extension • Ban-Drip: Clean or replace seat gasket; replace rod spring (RS-49)
